Important Information

This annual report is for informational purposes only and is not intended to recommend any investment discussed in this report. This annual report is not an offer to sell nor the solicitation of an offer to purchase an interest in any investment vehicle managed or sponsored by Sentinel Capital Partners, L.L.C. or its affiliates (collectively, “Sentinel”).

Statements in this annual report are made as of the dates specified in this report, and Sentinel has no obligation to update the information in this annual report.

All information with respect to industry data has been obtained from sources believed to be reliable and current; however, none of Sentinel or its respective affiliates makes any representation or warranty, express or implied, with respect to the fairness, correctness, accuracy, reasonableness, or completeness of any information contained herein (including, but not limited to, economic, market, or other information) obtained from third

parties, and each expressly disclaims any responsibility or liability therefor. The delivery of this information shall not, under any circumstances, create any implication that the information contained herein is correct in all respects, including as of any time subsequent to the date of this report. Further, Sentinel does not undertake an obligation to update such information at any time after such date. Unless otherwise stated herein, information is current through December 31, 2025.

Any investment in any private fund managed or sponsored by Sentinel is subject to various risks, none of which is outlined herein. A description of certain risks involved with an investment in any private fund managed or sponsored by Sentinel can be found in the offering memorandum of such private fund; such risks should be carefully considered by prospective investors before they make any investment decision.

This annual report contains certain performance information for existing Sentinel private funds and selected portfolio companies of such funds. The portfolio company case studies are intended to illustrate the various types of portfolio company investments that Sentinel has made. Performance information for all portfolio companies is available from Sentinel upon request.

The benchmark statistics for 2019-vintage private equity funds reflect the investment performance of a collection of U.S. private equity buyout funds selected by Cambridge Associates LLC, including fully liquidated funds, formed in 2019 (the “CA 2019 Benchmark”). The returns of the funds included in the CA 2019 Benchmark are net of all applicable fees, expenses and carried interest. The Standard & Poor’s 500 Index (the “S&P 500”) sets forth the performance of a well-known broad-based stock market index, assuming reinvestment of dividends. The S&P 500 contains only seasoned equity securities. The Dow Jones Industrial Average (the “DJIA”) sets forth the price-weighted average performance of 30 actively traded “blue chip” stocks of primarily industrial issuers.

Investors generally cannot invest directly in the CA 2019 Benchmark, the S&P 500, or the DJIA, which are presented for reference purposes only. The statistical data regarding the CA 2019 Benchmark, the S&P 500, and the DJIA have been obtained from sources believed to be reliable. Sentinel intends for the Sentinel funds to pursue, and they have previously pursued, a private equity strategy, although the Sentinel funds may also make, and they have previously made, investments outside of this strategy from time to time and may not pursue other strategies followed by some or all of the funds included in the CA 2019 Benchmark, nor will the Sentinel funds invest, and nor did they previously invest, in the funds comprising the CA 2019 Benchmark. The S&P 500 and the DJIA are commonly used, broad-based benchmarks for various markets and are provided only for general comparison against those markets. Investors generally are not able to invest in these indices. The criteria for including particular securities in these indices are different than Sentinel’s criteria for choosing investments for its funds. Specifically, the Sentinel funds do not invest in the securities comprising these indices. Rather, the Sentinel funds generally invest in portfolios of control investments in lower middle market businesses in the United States and Canada in specific industry sectors (as set forth in the funds’ offering materials and governing documents). In addition, an investment in any Sentinel fund generally will be subject to expenses, management fees, and carried interest charged or payable by the fund, none of which are reflected in these indices. For the foregoing and other reasons, the returns achieved by the Sentinel funds and the returns of the CA 2019 Benchmark, the S&P 500, and the DJIA should not be considered comparable.

The historical returns achieved by any prior funds or individual investments are not a prediction of future performance or a guarantee of future results, and there can be no assurance that these or comparable returns will be achieved by investments, individually or in the aggregate, made by any existing or future Sentinel private fund.

As used herein, “gross IRR” represents the gross compound annual rate of return based on realized and unrealized proceeds using quarterly cash flows and incorporates valuing the remaining debt positions at accreted cost and valuing the remaining equity positions based on EBITDA multiples at the date of investment. Gross IRR is calculated before the deduction of management fees, partnership expenses, carried interest, and other expenses borne by investors.

As used herein, “gross multiple of cost” and “gross multiple of investment” are reflected on a gross basis and do not reflect the deduction of management fees, partnership expenses, carried interest, and other expenses borne by investors.

As used herein, “levered net IRR” represents the compound annual rate of return, calculated after payment of applicable management fees, partnership expenses, carried interest, and other applicable expenses. An individual limited partner’s levered net IRR may vary based on the timing of capital contributions and distributions, as well as other factors such as excuse rights, different terms, or limited partner characteristics. Levered net IRR for the Partnership or groups of unrealized investments as a whole assumes unrealized investments are sold as of December 31, 2025 and proceeds are distributed through the Partnership’s waterfall in accordance with the terms and conditions of the Partnership’s Agreement of Limited Partnership (the “LPA”). Calculations of levered net IRRs in respect of investment and performance data included and/or referred to herein are based on the payment date of capital contributions received from limited partners, irrespective of whether a subscription-based credit facility was used to initially fund such investment.

As used herein, “unlevered net IRR” represents the compound annual rate of return, calculated after payment of applicable management fees, partnership expenses, carried interest, and other applicable expenses (but excluding interest expense on any subscription-based credit facility). An individual limited partner’s unlevered net IRR may vary based on the timing of distributions, as well as other factors such as excuse rights, different terms, or limited partner characteristics. Unlevered net IRR for the Partnership or groups of unrealized investments as a whole assumes unrealized investments are sold as of December 31, 2025 and proceeds are distributed through the Partnership’s waterfall in accordance with the terms and conditions of the LPA. Calculations of unlevered net IRRs in respect of investment and performance data included and/or referred to herein are based on the closing/funding date of each applicable investment, irrespective of whether a subscription-based credit facility was used to initially fund such investment.

Note that a feature in the LPA provides for an increase in the carried interest payable to the Partnership’s general partner, from 20% to 25%, if certain return thresholds are met, provided that the distributions in respect of such increased carried interest may not be distributed to the Partnership’s general partner until the investment period of the Partnership terminates. The calculation of the Partnership’s unlevered and levered net IRRs presented herein assumes that the Partnership’s investment period has not terminated (as was true at the time of issuance hereof). However, if the calculation were to assume, alternatively, that the investment period had terminated and the relevant return thresholds had been met, then the carried interest rate applied in respect of distributions in excess of the limited partners’ aggregate capital contributions and a 9% preferred return thereon would be 25%, and the unlevered and levered net IRRs of the Partnership would be reduced accordingly.

As used herein, “DPI” or “distributed/paid-in” means distributions received by limited partners relative to contributed capital. DPI is reflected on a net basis and reflects the deduction of management fees, partnership expenses, carried interest, and other expenses borne by limited partners.

As used herein, “TVPI” or “total value/paid-in” or “net multiple of cost” means distributions received by limited partners and the unrealized value relative to contributed capital. TVPI and net multiple of cost are reflected on a net basis and reflect the deduction of management fees, partnership expenses, carried interest, and other expenses borne by limited partners.

Presentation of net performance information for subsets (realized and unrealized) of the Partnership is a hypothetical estimate of net performance because actual net returns cannot be calculated for a subset of portfolio investments due to the collective nature of fund fees and expenses. Net performance figures for this subset of the Partnership are estimated and do not represent actual performance experienced by investors. Sentinel has used the gross-net spread at the fund level to calculate such net performance. These figures illustrate the potentially substantial impact of fees, carried interest, and expenses on the gross returns of extracted performance, even though these amounts are charged or allocated at the fund level. The cumulative and hypothetical composite investment performance data presented herein does not necessarily represent performance achieved by any investor, and reflects investments that were made across multiple Sentinel funds during different economic cycles. Such stated performance reflects neither a specific Sentinel fund nor a group of investments managed as a single portfolio. The actual return realized by any investor in an individual Sentinel fund may differ materially from those reflected or contemplated in the data presented herein. Net performance for individual investments also cannot be calculated without making arbitrary assumptions, and for that reason, the performance of individual investments herein is presented on a gross basis. See the “Fund Performance” Section for total fund gross and net performance metrics.

No representation or warranty is made with respect to the reasonableness of any estimates, forecasts, illustrations, prospects or returns, which should be regarded as illustrative only, or that any profits will be realized. This report contains certain “forward-looking statements,” which may be identified by forward-looking terminology such as “believe,” “expect,” “anticipate,” “should,” “planned,” “estimated,” “potential,” “outlook,” “forecast,” “plan,” or the negatives thereof or other variations thereon or comparable terminology. Examples of forward-looking statements include, but are not limited to, estimates with respect to financial condition, results of operations, success or lack of success of Sentinel’s investment strategies, and statements regarding Sentinel’s investment thesis. Any forward-looking statements (including, without limitation, projections of future earnings or value) contained in this annual report are only estimates of future results that are based on assumptions made by Sentinel at the time this report was prepared. Each forward-looking statement contained in this annual report is subject to known and unknown risks, uncertainties, and other factors that may cause actual results to be materially different from those contemplated in such forward-looking statement. Accordingly, there can be no assurance that the results described by any such forward-looking statement will be attained, and actual results may be significantly different from such forward-looking statement. Sentinel does not undertake any obligation to update or revise the forward-looking statements contained in this annual report to reflect events or circumstances occurring after the date this report was prepared or to reflect the occurrence of unanticipated events.

Sentinel seeks to integrate certain sustainability and responsibility (“S&R”) factors into its investment process in accordance with its policy and subject to its fiduciary duty and any applicable legal, regulatory, or contractual requirements. There is no guarantee that Sentinel will be able to successfully implement its S&R policy or make investments in companies that create a positive S&R impact while achieving its investment strategy. In addition, applying S&R factors to investment decisions is qualitative and subjective by nature, and there is no guarantee that the criteria used by Sentinel or any judgment exercised by Sentinel will reflect the beliefs or values of any particular investor. There are also significant differences in interpretations of what positive S&R characteristics mean by region, industry and topic. Sentinel’s interpretations and decisions may differ from others’ views and could evolve over time. In addition, in evaluating an investment, Sentinel expects to depend upon information and data provided by a number of sources, including the relevant investments and/or various reporting sources which could be incomplete, inaccurate or unavailable, and which could cause Sentinel to incorrectly assess a company’s S&R practices and/or related risks and opportunities. Sentinel does not intend to independently verify all S&R information reported by investments or third parties.

Further, considering S&R qualities when evaluating an investment could result in the selection or exclusion of certain investments based on Sentinel’s view of certain S&R related and other factors and could cause the relevant funds not to make an investment that they would have made or to make a management decision with respect to an investment differently than they would have made in the absence of the S&R Policies, which could negatively impact the Partnership’s performance. For the avoidance of doubt, however, Sentinel does not expect to subordinate a Partnership’s investment returns or increase the Partnership’s investment risks as a result of (or in connection with) the consideration of any S&R factors. Further, S&R practices are evolving rapidly and there are different principles, frameworks, methodologies, and tracking tools being implemented by other asset managers, and Sentinel’s adoption and adherence to various such principles, frameworks, methodologies, and tools are expected to vary over time. There is also a growing regulatory interest across jurisdictions in improving transparency regarding the definition, measurement, and disclosure of S&R factors. Sentinel’s S&R policies could become subject to additional regulation in the future, and Sentinel cannot guarantee that its current approach will meet future regulatory requirements.

This annual report is intended for authorized recipients only and must be held strictly confidential. This annual report includes confidential, proprietary, and trade secret information of Sentinel. By accepting this information, each recipient agrees that (i) no portion of this annual report may be reproduced or distributed in any format without the prior express written consent of Sentinel, (ii) it will not copy, reproduce, or distribute this annual report, in whole or in part, to any person or party, and (iii) it will keep confidential all information contained herein that is not already public.

March 31, 2026

SENTINEL CAPITAL PARTNERS VI, L.P.
SENTINEL CAPITAL PARTNERS VI-A, L.P.
SENTINEL CAPITAL INVESTORS VI, L.P.

Annual Report for the Period Ended December 31, 2025

Dear Limited Partner:

Sentinel Capital Partners VI, L.P. (“Sentinel VI”) and its parallel funds—Sentinel Capital Partners VI-A, L.P. (“Sentinel VI-A”) and Sentinel Capital Investors VI, L.P. (“Sentinel Investors VI,” and together, “the Partnership”)—completed their sixth year of operations on December 31, 2025. The Partnership began its investment operations on April 1, 2019, which marked the Partnership’s official start date. This report covers the year ending December 31, 2025 for the Partnership. The audited financial statements for 2025 are now available.

For the year ended December 31, 2025, Sentinel VI’s net loss from investment operations was \$72.8 million, resulting in a net asset value (“NAV”) of \$1.2 billion on December 31, 2025. Sentinel VI-A reported a net loss of \$5.6 million and a NAV of \$95.0 million, and Sentinel Investors VI reported a net loss of \$1.5 million and a NAV of \$24.8 million. These losses resulted from unrealized writedowns in four portfolio companies, partly offset by unrealized writeups in seven.

At year-end, the Partnership had taken down or committed \$2.2 billion, or 103.9% of its committed capital, and had invested in 18 companies. Cumulative distributions from inception through December 31, 2025 have been \$1.6 billion, or 0.7x contributed capital. Including cumulative distributions, the Partnership’s NAV on December 31, 2025 was \$2.9 billion, or 1.3x contributed capital.

The Partnership’s 18-company portfolio represents an aggregate purchased enterprise value of \$5.6 billion. All 18 companies conform to Sentinel’s investment strategy—(i) each is a midmarket business in one of our four core sectors; (ii) the average EBITDA purchase multiple is 10.1x, underscoring our relative-value approach; and (iii) all are leaders in their market niches. As of December 31, 2025, the portfolio—counting both realized and unrealized investments—had a value of \$2.9 billion, representing a 1.4x gross multiple of cost and a gross IRR of 13.6%. After fees and expenses, the net levered/unlevered IRR to limited partners is 9.6%/9.5%, with a DPI of 0.6x and a TVPI of 1.2x.¹ All investments are valued in accordance with FASB ASC 820 standards.

Topics highlighted in this letter include (i) navigating through uncertainty, (ii) enhancements to our investment decision and value creation processes, (iii) progress in our AI initiative, (iv) the Partnership’s performance since inception, (v) portfolio construction, (vi) a first-quarter 2026 follow-on investment, (vii) liquidity events and limited partner distributions, (viii) portfolio company valuations, (ix) portfolio

¹ *Past performance is not necessarily indicative of future results.* Returns show unrealized valuations. The actual realized return of such unrealized investment may differ materially from the returns indicated herein. Please see “Important Information” at the front of this report for more information on calculation methodologies for net returns.

company operating metrics, (x) sustainability and responsibility initiatives, (xi) organizational developments, and (xii) progress across our other funds.

Navigating Through Uncertainty

We entered 2025 with high hopes. Inflation was moderating, interest rate cuts were widely expected, and a pro-business administration was set to take office in January. That optimism proved short-lived. The scale and scope of tariffs announced in April exceeded market expectations and quickly reversed industry sentiment on inflation and interest rates. Sale processes stalled, and the outlook for many private equity portfolio companies shifted materially. These conditions kept industrywide DPs subdued, and fundraising remained difficult. Especially for businesses insulated from tariffs, sale multiples were exceedingly high.

In response, we maintained strict price discipline in evaluating new investments. We also prioritized supporting our existing portfolio companies as they navigated the disruption. Management teams, including ours, were not prepared for the tariff shock and its implications. Across our 22 active, majority-owned portfolio companies, four were significantly affected by tariffs and another six moderately so. By the fourth quarter, the portfolio had largely absorbed the impact, although for certain companies, the new environment reset baseline economics. The Supreme Court's recent decision curtailing tariffs could provide some relief, but it is too soon to tell.

Another macroeconomic disruption occurred later in the year when the government shut down for 43 days. Fortunately, only one Sentinel portfolio company—focused on defense logistics—was significantly affected, but its operations, essential to the military, quickly returned to normal.

A highlight of 2025 was a liquidity event that also derisked NSI, one of our newest investments. NSI was a complex situation where we saw potential to unlock value by divesting a noncore HVAC business unit and focusing on electrical products, an attractive, growing sector where we've had success. With both business units performing well, NSI sold its HVAC division to a strategic buyer in October, enabling a significant distribution for the Partnership and two other Sentinel funds (see page 6).

Looking ahead, the macro picture is unsettled. The war in the Middle East and its impact on energy prices and inflation, the broad and potentially disruptive implications of AI, renewed uncertainty around tariffs, and the unclear direction of interest rates under a Fed with a new chair all contribute to an unclear outlook. There are, however, some encouraging signs. Private equity prospects began to improve in the back end of 2025, although the rebound was narrow and disproportionately driven by a small number of large transactions. We believe this recovery could broaden, given the industry's record overhang of unsold businesses, the wide availability of debt financing, and an upturn in M&A activity. With mounting LP pressure to address the industry's core liquidity problem, the bid-ask gap between buyers and sellers may begin to tighten.

In this environment, investment success increasingly depends not on market tailwinds but on the ability to generate alpha at the portfolio-company level.

A Year of Reflection and Retooling

As Bain's *Global Private Equity Report 2026* observes, the era of easy money is over. Returns in the next five years will depend less on multiple expansion and financial engineering and more on true

operational value creation. Performance will hinge not on market conditions but on revenue and EBITDA growth, operational excellence, and disciplined liquidity planning.

Building on our longstanding focus on operational improvement, we've been amping up our efforts to drive alpha. Under the leadership of partner Michael Fabian, a 20-year Sentinel veteran, we've enhanced our pre- and post-closing value creation process, accelerated the sharing of best practices across the firm, and systematically expanded our outside resources and bench of operating partners (see page 18). We've also significantly broadened our portfolio-facing human capital function by implementing ongoing, post-close C-suite assessments. This effort is led by operating partner Lori Malcolm, who also mentors HR leaders across our portfolio.

In parallel, we have embraced AI across the firm and recently institutionalized its implementation and deployment with the hiring of our first Head of AI (see page 4). Our team is using AI to help both Sentinel and our portfolio companies optimize internal processes and to prepare for a technological environment that is widely expected to be transformative.

In the last year and a half, we've revamped our investment decision process in two important ways. First, while preserving the right of each professional to veto investments, we have implemented a deal rating system that captures nuanced views and degrees of conviction. Because vetoes are rarely exercised, this system has proven especially valuable by stimulating debate and pinpointing concerns.

Second, we have developed a template to evaluate prospective investments across 14 attributes strongly correlated with Sentinel's most successful investments. This framework prevents overweighting a few headline metrics and ensures a more holistic assessment. NSI was the first platform investment evaluated under this new process. In parallel, we're leveraging AI to generate additional insights into our decision-making process and to measure outcomes. Taken together, these enhancements are designed to sharpen our investment judgment.

For Sentinel VI, 2025 was a difficult year. We realized two losses to which we devoted substantial resources. A third exit was very disappointing—while the investment returned most of our cost, it began with enormous promise but ended well short of expectations. These outcomes prompted considerable introspection and led to the meaningful changes described above. We've intensified our value creation efforts—working closely with management teams, deploying our operating partners as boots on the ground more often—while also helping portfolio companies thoughtfully assess and incorporate AI into their operations where it can drive measurable value.

Although the Partnership's aggregate IRR at year-end trails our historical results, we believe the remaining portfolio has considerable upside potential and that the fund's ultimate performance will improve meaningfully. With a 0.6x DPI as of December 31, 2025, Sentinel VI remains in the top quartile of peer funds for this important benchmark, which we have consistently prioritized since inception.^{1,2}

Advancing AI

Our adoption of AI has been measured and methodical. We started two years ago by studying the landscape and testing tools in areas where leverage matters most—due diligence, underwriting,

¹ Based on 9/30/2025 Cambridge Associates data. Please see "Important Information" at the front of this report for more information on the Cambridge Associates benchmark indices and the limitations of comparability.

² Past performance is not necessarily indicative of future results. Please see "Important Information" at the front of this report for more information.

research, and portfolio monitoring. Since then, we've integrated ChatGPT and Claude Enterprise into our research workflows, helping us synthesize information faster, spot patterns more quickly, and pressure-test assumptions.

In 2025, we launched pilot programs in two portfolio companies. At one company, we're deploying AI tools to improve field manager productivity by prioritizing client outreach and reinforcing follow-through. The goal is to increase revenue per manager and strengthen customer retention through better data-driven engagement. At another company, we identified key areas where AI can accelerate growth and expand margins while helping protect the business from AI-enabled alternatives.

Our early efforts led us to an obvious conclusion: if AI is going to matter, it has to be built into the fabric of the firm. In February 2026, Dr. Yoni Malchi joined Sentinel as our first Head of AI. As you'll see from his bio on page 18, Yoni brings deep experience in AI, data science, and digital transformation. He'll lead the buildout of our AI capabilities in-house and across our portfolio companies.

Our AI strategy has three prongs:

Within Sentinel, we're developing data-driven tools to enhance underwriting discipline, strengthen portfolio monitoring, improve exit execution, and extract deeper insights from our historical performance data. In an environment where value creation increasingly depends on revenue and EBITDA growth, improved speed, consistency, and analytical depth compound over time.

Across the portfolio, we're partnering with our management teams to identify targeted use cases where AI can drive measurable value through revenue acceleration, margin expansion, operational efficiency, and risk mitigation. We evaluate each initiative the same way we look at any capital allocation decision: what's the return, what are the risks, and who's accountable?

We are gauging AI's potential to disrupt the businesses we're invested in and the ones we're considering. For active portfolio companies, this includes building a continuous monitoring process for early identification of AI-related threats and opportunities.

While our program is in its early stages, we have committed meaningful financial and human capital to integrating this transformative technology. AI will never replace sound judgment. But we believe that properly applied, it can improve our investment edge and portfolio performance in a more competitive era. We look forward to reporting continued progress in future letters.

Fund Performance

The Partnership commenced investing in 2019 and, through December 31, 2025, had invested \$2.1 billion in 18 portfolio companies, 11 of which were active. With the Partnership having taken down or committed 103.9% of its \$2.2 billion of committed capital, we have completed the fund's primary investment phase.

As of December 31, 2025, seven investments have been fully realized and generated \$1.5 billion of cash proceeds, a 2.1x gross multiple of cost, and a 30.1% gross IRR.¹ The Partnership's \$2.1 billion aggregate investment in its 18 portfolio companies has produced \$2.9 billion of total value, representing a

¹ Past performance is not necessarily indicative of future results. Returns show unrealized valuations. The actual realized return of such unrealized investment may differ materially from the returns indicated herein. Please see "Important Information" at the front of this report for more information on calculation methodologies for net returns.

1.4x gross multiple of cost, a 13.6% gross IRR, a 9.6%/9.5% net levered/unlevered IRR, a 0.6x DPI, and a 1.2x TVPI, as shown in the table below.

Partnership Investment Performance Since Inception¹
As of December 31, 2025
(\$000s)

Fund VI (2019 Vintage)	Number of Investments	Amount Invested	Cash Realized	Unrealized Value	Total Value	Gross Multiple of Cost	Gross IRR
Realized Investments	7	\$714,512	\$1,493,994	\$3,039	\$1,497,033	2.1x	30.1%
Unrealized Investments	11	1,416,724	102,991	1,338,015	1,441,006	1.0x	0.5%
Total Fund VI	18	\$2,131,236	\$1,596,986	\$1,341,054	\$2,938,040	1.4x	13.6%
Net Levered / Unlevered IRR = 9.6% / 9.5%			DPI = 0.6x		TVPI = 1.2x		

The Partnership's 0.6x DPI places Sentinel VI in the upper quartile of 2019-vintage private equity funds for this metric. According to Cambridge Associates, as of September 30, 2025, the upper-quartile benchmarks for 2019-vintage buyout funds were 0.6x for DPI, 1.9x for TVPI, and 19.9% for net IRR.²

Lines of Credit

As of December 31, 2025, the Partnership maintained a \$96.3 million warehouse credit facility with BMO Harris Bank and an additional \$100.0 million line of credit, both of which had zero balances outstanding. Amounts borrowed bear interest at the prime rate minus 0.375%, or SOFR plus 2.775%. As of December 31, 2025, the Partnership was in compliance with all terms of the loan agreement.

Portfolio Construction

The capital invested in the 18-company portfolio is well diversified, with no single investment representing more than 8.9% of the Partnership's total committed capital. The portfolio is also diversified across our four core industry sectors, as shown in the chart below.

Sentinel VI
(\$2.2 billion | 103.9% invested | 18 portfolio companies)

¹ Past performance is not necessarily indicative of future results. Returns show unrealized valuations. The actual realized return of such unrealized investment may differ materially from the returns indicated herein. Please see "Important Information" at the front of this report for more information on calculation methodologies for net returns.

² Please see "Important Information" at the front of this report for more information on the Cambridge Associates benchmark indices and the limitations of comparability.

Follow-on Investment in Catalyst MedTech

In March 2026, the Partnership invested an additional \$7.5 million in a last-out senior term loan in conjunction with Catalyst’s acquisition of a manufacturer of branded SPECT medical imaging equipment. The \$12.5 million purchase price represents a highly accretive 6.5x multiple of the add-on’s \$1.9 million of EBITDA. The follow-on brings the Partnership’s total investment in Catalyst to \$108.5 million.

Liquidity Events and Distributions

In 2025, the Partnership received \$28.1 million of cash proceeds from three portfolio companies, as shown in the table below.

2025 Liquidity Events ¹ (\$000s)			
Company	Date	Proceeds	Description / % Committed Capital
ECM Industries	3/12/2025	\$557	Additional sale proceeds
NSI Industries	11/4/2025	25,774	Return of capital
TranSystems	3/7/2025	1,735	Additional sale proceeds
2025 Proceeds		\$28,067	1.3% Committed Capital

Summaries of the liquidity events follow:

ECM Industries. In March 2025, the Partnership received \$0.6 million representing additional proceeds from the 2023 sale. Including all proceeds received through 2025 and valuing the remaining escrow at 50% of face value, ECM has returned \$532.0 million, or 3.8x cost, for a gross IRR of 57.3%.²

NSI Industries. Consistent with our going-in strategy to divest a noncore operation, in October 2025, NSI sold its HVAC division to strategic buyer Lennox International Inc. (NYSE: LII) for \$550.0 million in cash, or 10.0x trailing 12-month EBITDA. In the less than one year Sentinel owned NSI, its HVAC segment performed well. The divestiture refocused NSI as a pure-play branded electrical products manufacturer and resulted in a \$182.9 million shareholder distribution, of which the Partnership’s share was \$25.8 million, or 0.3x cost.²

TranSystems. In March 2025, the Partnership received \$1.7 million of escrowed proceeds related to the 2024 sale. Including all proceeds received through 2025 and valuing the seller holdback at 50% of face value, TranSystems has returned \$278.5 million, or 3.0x cost, for a gross IRR of 39.3%.²

From the cash proceeds described above, the Partnership distributed \$28.1 million to limited partners, or 1.3% of committed capital. Of this amount, \$6.9 million was distributed in cash and \$21.2 million was retained by the Partnership to fund expenses. Pursuant to the Partnership Agreement, all net proceeds from portfolio investments must be distributed to the limited partners. Accordingly, a deemed distribution and simultaneous deemed contribution of \$21.2 million was recorded. This treatment

¹ Past performance is not necessarily indicative of future results. “Important Information” at the front of this report provides more information.

² Past performance is not necessarily indicative of future results. The gross multiple of cost and gross IRR metrics set forth herein are presented on a gross basis, which does not reflect fees, expenses, and carried interest. See “Fund Performance” for total fund gross and net performance metrics. Please see “Important Information” at the front of this report for more information.

reduces each limited partner's remaining capital commitment by the amount of the deemed capital contribution, the impact of which is reflected in our audited financial statements.

Since inception, the Partnership has returned a total of \$1.4 billion to limited partners. Net of fees, expenses, and carried interest, the DPI is 0.6x.¹

Portfolio Company Progress and Valuations²

In 2025, seven of the Partnership's 11 portfolio companies appreciated in value and four declined. In total, the portfolio's value as of December 31, 2025 decreased \$57.4 million, or 4.0%. The EBITDA multiples used to value each unrealized portfolio company, along with the resulting changes in valuation by company and for the Partnership overall, are shown in the table below.

Realized and Unrealized Portfolio Valuations
Trailing 12-Month Performance Comparison as of December 31, 2025
(\$000s)

Company	Total Investment Cost	Value at 12/31/2024	12/31/2025 Debt / EBITDA	EBITDA Multiples			Value at 12/31/2025	Changes vs. Prior Year or Cost	
				Entry	12/31/2024	12/31/2025		In Value	%
Realized Portfolio									
AmWest	\$76,276	\$0					\$0	\$0	0.0%

Total	\$1,805,736	\$1,424,594	5.8x	10.8x	10.7x	10.4x	\$1,367,175	(\$57,419)	(4.0%)

¹ Past performance is not necessarily indicative of future results. "Important Information" at the front of this report provides more information.

² Under GAAP, the Partnership is required to value its portfolio companies at fair market value. This requirement introduces inherent volatility into quarter-to-quarter and year-to-year private equity fund valuations, and the Partnership is no exception.

³ Values as of 12/31/2025 include trailing 12-month distributions received.

The average EBITDA multiple for the unrealized portfolio at December 31, 2025 was 10.8x, down from 10.9x the prior year-end and down from the 11.1x entry multiple paid for the entire unrealized portfolio. During the Partnership's investment period to date, the average EBITDA purchase multiple for U.S. private equity has been 12.5x.¹ Consistent with our relative-value strategy, the average EBITDA multiple we paid for the 18-company portfolio was 10.1x.

A brief discussion of the 14 unrealized and recently realized portfolio companies follows.²

American West Restaurant Group. As previously reported, AmWest significantly underperformed. Performance was adversely affected by leadership turnover and operational challenges at franchisor Pizza Hut, including failed menu innovation and ineffective marketing initiatives, as well as the materially negative impact of California's 25% minimum wage increase for fast food workers. Underscoring Pizza Hut's systemwide struggles, parent Yum! Brands recently announced its intent to close 250 underperforming Pizza Hut restaurants in 2026 and that it is considering divesting the Pizza Hut brand.

Despite substantial cost reduction efforts—including transitioning to outsourced delivery and reducing G&A—AmWest was unable to meet its debt and royalty obligations. After careful evaluation, and with no credible investment thesis to justify additional capital in a deeply distressed situation, we elected to relinquish control to AmWest's lender on June 18, 2025, with a full release for the Partnership. This was a difficult outcome, but we believe it was the correct one under the circumstances. This said, we take responsibility for the result and the capital loss incurred. Because the investment had previously been written down to zero, the realized loss did not affect the Partnership's 2025 net income; however, that accounting fact does not lessen the economic impact.

The outcome is particularly disappointing given Sentinel's successful prior ownership of AmWest, which we believed we could replicate. However, structural challenges at the franchisor and sharply higher labor costs in California proved insurmountable. We continue to hold AmWest's management team in high regard—their resourcefulness, dedication, and grit were exceptional throughout a difficult operating environment.

Bandon Holdings. Bandon significantly underperformed in 2025. Membership attrition persisted, albeit at a slower rate, reflecting increased marketing spend, improved member satisfaction and retention, and expanded sales of personal training packages. For the year, revenue decreased 3.0% year-over-year to \$117.9 million, and EBITDA declined 25.3% to \$26.4 million. The underperformance led to a covenant breach, followed by a forbearance agreement extending through February 2026. As of December 31, 2025, net debt to EBITDA was 6.4x, up from 4.6x the prior year.

While management has slowed membership attrition, the down-trend has not yet reversed and continues to pressure performance. In parallel, discussions with lenders regarding a comprehensive debt solution are underway, and we expect to face a decision about follow-on equity financing in the coming weeks. As of December 31, 2025, Sentinel continues to value Bandon at the same 8.6x EBITDA multiple we paid for the business, unchanged from the prior year. Adjusting

¹ Source: PitchBook, September 2025.

² Detailed portfolio company writeups begin on page A-1.

for net debt outstanding as of December 31, 2025, Sentinel is valuing the Partnership's holdings at \$49.9 million, or 0.4x cost and down 60.0% from the prior year.¹

Catalyst MedTech. In 2025, Catalyst's turnaround plan showed tangible progress, particularly in the second half as the business reversed a multiyear decline. In the first half, however, despite healthy demand for Catalyst's equipment, ongoing fulfillment delays constrained order-to-revenue conversion and resulted in a covenant breach, which the lenders temporarily waived. By year-end, these delays had been resolved. For the year, revenue declined 1.9% to \$114.9 million due to the fulfillment issues, while adjusted EBITDA rose 29.5% to \$12.4 million. As of December 31, 2025, net debt to EBITDA was 7.8x, down from 9.7x the prior year.

In March 2026, in conjunction with the highly strategic add-on and associated follow-on investment discussed on page 6, we reached a comprehensive agreement with lenders that gives Catalyst more time and flexibility to execute its turnaround plan, while positioning the company for growth. The revised debt agreement includes a reset of covenants, improved pricing, and an extension of the debt maturity to December 2029. Pro forma for the add-on, Catalyst's total net debt to EBITDA improves from 7.8x to 6.7x. We are cautiously optimistic about Catalyst, which enters the second quarter with solid momentum, exposure to a rapidly growing market, and the most challenging elements of the turnaround largely behind it. Management is now focused on driving profitable growth.

As of December 31, 2025, Sentinel is valuing its senior term loan at par and its equity at the same 11.9x EBITDA we paid for the business, unchanged from the prior year-end. Adjusted for net debt outstanding as of December 31, 2025, this results in a \$31.5 million valuation for the Partnership's equity securities. The total value of the Partnership's combined holdings as of December 31, 2025 was therefore \$34.0 million, or 0.3x cost and up 297.3% from 2024.¹

Empire Auto. In 2025, the collision repair industry faced significant headwinds, including elevated insurance premiums, moderating used-car values, and newly imposed tariffs on imported parts. Empire's revenue increased 5.9% year-over-year to \$276.9 million, while adjusted EBITDA declined 22.5% to \$42.9 million, reflecting soft repair volumes and continued investment in new regions. To accelerate strategic execution across its expanded footprint, Empire made a leadership change by promoting its CFO to CEO and strengthening certain other executive positions. Under its new CEO's leadership, Empire implemented dynamic pricing capabilities that began driving meaningful performance improvement in the fourth quarter. Entering 2026, Empire is positioned to resume sustainable profit growth.

As of December 31, 2025, Sentinel continues to value Empire at the same 11.2x EBITDA multiple we paid for the business, unchanged from year-end 2024. After adjusting for net debt outstanding and incorporating a run-rate adjustment for recently opened locations and a normalized level of working capital as of December 31, 2025, the value of the Partnership's investment is \$111.0 million, or 0.7x cost and down 54.4% from the prior year. Including cumulative proceeds through 2025, the value of the Partnership's holdings as of December 31, 2025 was \$188.2 million, or 1.3x cost.¹

¹ Past performance is not necessarily indicative of future results. The gross multiple of cost set forth herein is presented on a gross basis, which does not reflect fees, expenses, and carried interest. See "Fund Performance" for total fund gross and net performance metrics. Returns show unrealized valuations. The actual realized return of such unrealized investment may differ materially from the returns indicated herein. Please see "Important Information" at the front of this report for more information.

New Era Technology. New Era was another realized loss during the year. As previously reported, New Era's financial performance has deteriorated steadily since 2022. Macroeconomic pressures, weak demand, tariffs, and escalating labor costs contributed to declines in sales and profitability. These pressures were compounded by overly aggressive cost-cutting measures that impaired operating efficiency and worsened the revenue contraction. By mid-2025, covenant breaches and unsustainable leverage left the company unable to support its capital structure. As of June 30, 2025, New Era's net debt to EBITDA was 19.7x.

Despite meaningful efforts to stabilize the business—including appointing a new CEO in 2024 and implementing a comprehensive turnaround plan that did improve operations—EBITDA remained insufficient to support the debt load. When lenders required a substantial equity infusion behind their debt, we determined such an investment was not justified. The lenders subsequently assumed ownership control in an orderly transfer on August 21, 2025, with a full release for the Partnership.

This outcome is deeply disappointing. We take responsibility for the result and have reviewed the factors that led to it to ensure appropriate lessons are incorporated into our underwriting and oversight processes. As with AmWest, the investment had been written down to zero in the prior year and therefore did not impact 2025 net income, but that accounting fact does not lessen the impact of the loss.

New You Bariatric Group. In the first three years of our investment, NYBG executed effectively against our underwriting thesis—pursuing growth in a fragmented and attractive medical services specialty through de novo expansion and add-ons across existing and new geographies. NYBG increased its footprint from 15 affiliated clinics at the August 2019 closing to 24 in 2022. Over that three-year period, pro forma revenue grew at a 36.2% CAGR, from \$48.4 million to \$122.2 million, and EBITDA nearly doubled, from \$19.7 million to a peak of \$37.8 million in 2021. This growth was achieved despite the pandemic's significant impact on elective surgery volumes in 2020. Based on this strong early performance, Sentinel prudently reduced risk by completing a dividend recap in 2022 that returned \$43.4 million to the Partnership, or 0.7x cost.

In 2023, an unexpected pharmaceutical development materially disrupted the bariatric surgery market. The rapid and widespread adoption of next-generation prescription weight-loss drugs significantly reduced demand for bariatric surgery, resulting in a sustained contraction in procedure volumes. Over the following three years, NYBG's EBITDA declined to \$10.6 million for the 12 months ended September 30, 2025, less than one-third of the 2021 peak and insufficient to support the capital structure.

With no evidence that the new class of drugs represented a temporary disruption, we could not justify investing additional capital. In October 2025, control transitioned to NYBG's lenders in an orderly process with a full release for the Partnership. The lender-led restructuring recapitalized NYBG through a debt-for-equity exchange at an enterprise value of \$59.9 million, or 5.7x EBITDA. Of the \$204.6 million of outstanding debt, \$48.1 million remained in place and the balance was converted into equity valued at \$11.8 million. In connection with the restructuring, the Partnership's \$5.0 million senior debt position was exchanged for \$1.2 million in new senior debt and a 1.7% equity stake valued at \$0.2 million, for a total value of \$1.5 million.

As of December 31, 2025, we are valuing the Partnership's holdings at \$1.5 million, reflecting the value established by the restructuring. Including \$59.3 million of cumulative proceeds received

through 2025, the total value of the Partnership's holdings as of December 31, 2025 is \$60.8 million, or 0.9x cost.¹

While we were able to substantially derisk NYBG through the 2022 recap, we are very disappointed by the outcome for what was a promising investment. Although the economic loss relative to peak unrealized value is significant, the writedown does not materially affect 2025 net income, as the investment had been written down in prior periods.

NSI Industries. For NSI, 2025 was transformational. In a planned leadership transition, NSI's CEO moved to a board-only role, and the CFO became interim CEO. In October, as discussed on page 6, NSI sold its HVAC division to a strategic buyer, generating a \$25.8 million distribution to the Partnership, or 0.3x its investment. Following the divestiture, NSI is well positioned to accelerate growth and gain market share as a pure-play electrical parts provider.

NSI delivered excellent performance in 2025. Excluding the divested HVAC business, revenue rose 9.7% year-over-year to \$509.8 million, and EBITDA increased 27.6% to \$138 million. Net debt to EBITDA declined to 5.1x as of December 31, 2025 from 5.4x the prior year-end. As of December 31, 2025, Sentinel is valuing NSI at the entry multiple of 9.9x EBITDA. Adjusted for net debt outstanding as of December 31, 2025, this values the Partnership's equity at \$94.4 million, up 23.1% from the prior year. Including proceeds from the divestiture, the value of the Partnership's holdings as of December 31, 2025 was \$120.2 million, or 1.6x cost and up 56.7% from the prior year.¹

Recreational Group. RecGroup delivered solid performance in 2025. Management stabilized sales and improved the bottom line by closing eight underperforming stores, converting two stores to a more profitable format, and implementing targeted cost-saving initiatives. These included a competitive RFP procurement process and outsourcing select SKUs, generating \$2.9 million of annualized savings. Revenue increased 0.4% year-over-year to \$327.8 million, and EBITDA rose 7.0% to \$59.5 million. As of December 31, 2025, net debt to EBITDA stood at 5.8x, down from 6.3x the prior year. To support its M&A strategy—expected to resume in 2026—RecGroup secured \$60.0 million of incremental DDTL capacity in December from existing and new lenders.

As of December 31, 2025, Sentinel is valuing RecGroup at the same 11.5x entry multiple paid for the business, unchanged from the prior year. Adjusted for net debt outstanding and a normalized level of working capital as of December 31, 2025, the Partnership's equity holdings are valued at \$190.8 million, or 1.2x cost and up 20.6% from the prior year.¹

RefrigiWear. In 2025, RefrigiWear expanded its European footprint with the acquisition of one add-on in the UK and another in Germany. The combined \$33.9 million purchase price represented an accretive 7.0x combined pro forma EBITDA and was financed with incremental term debt, cash on hand, and seller rollover.

Operating performance in 2025 was mixed. The U.S. business delivered steady results, despite the impact of tariffs. In Europe, however, integration challenges at a new distribution center disrupted order fulfillment and invoicing, pressuring profitability. For the year, pro forma revenue increased

¹ Past performance is not necessarily indicative of future results. The gross multiple of cost set forth herein is presented on a gross basis, which does not reflect fees, expenses, and carried interest. See "Fund Performance" for total fund gross and net performance metrics. Returns show unrealized valuations. The actual realized return of such unrealized investment may differ materially from the returns indicated herein. Please see "Important Information" at the front of this report for more information.

2.1% from 2024 to \$138.0 million, while EBITDA declined 7.1% to \$28.8 million. As of December 31, 2025, net debt to EBITDA was 6.2x, up from 5.2x the prior year, reflecting lower earnings.

Entering 2026, management has made meaningful progress addressing the warehouse issues, including appointing a new leader for the European business. With a leading position in a growing global market, we remain optimistic about RefrigiWear's prospects. As of December 31, 2025, Sentinel is valuing RefrigiWear at 11.5x EBITDA, unchanged from the prior year and below the 12.9x entry multiple, reflecting a blended multiple that incorporates subsequent larger add-ons. Adjusted for net debt outstanding as of December 31, 2025, the Partnership's holdings are valued at \$100.7 million, or 1.0x cost and down 10.1% from the prior year.¹

SmartSign. SmartSign's performance improved markedly in 2025. Supported by wallet share gains with distribution customers, a rebound at FenceScreen, and the closure of an underperforming unit, pro forma revenue increased 0.6% year-over-year to \$164.0 million, and EBITDA grew 6.4% to \$36.7 million. As of December 31, 2025, net debt to EBITDA was 6.0x, down from 6.4x the prior year.

With SmartSign's highly capable, new senior leadership team in place and strong momentum going into 2026, our outlook for the business is positive. As of December 31, 2025, Sentinel is valuing SmartSign at the same 11.9x EBITDA multiple paid for the business, unchanged from the prior year. Adjusted for net debt outstanding as of December 31, 2025, this values the Partnership's holdings as of December 31, 2025 at \$149.1 million, or 0.9x cost and up 18.9% from the prior year.¹

Spectrum Safety Solutions. For Spectrum, 2025 was highly productive. Spectrum made excellent progress on key strategic initiatives, including completing its transition to a standalone organization. Three business units completed add-ons—four in total—at a highly accretive, blended multiple of 8.2x combined EBITDA of \$5.1 million. The add-ons were financed with cash on hand and borrowings under the revolver facility.

Spectrum also delivered strong performance. Driven by new product development, disciplined pricing, and geographic expansion, pro forma revenue increased 12.0% year-over-year to \$666.9 million, and EBITDA rose 9.5% to \$145.2 million. As of December 31, 2025, net debt to EBITDA was 5.3x, down modestly from 5.4x the prior year due to the debt-financed add-ons. In January 2026, Det-Tronics acquired Norway-based Optronics, adding cutting-edge gas detection technology. Additional details will be provided in our first-quarter report.

Spectrum enters 2026 with a record backlog, and we remain highly optimistic about its outlook. As of December 31, 2025, we are valuing Spectrum at the same 11.1x EBITDA we paid. Adjusted for net debt outstanding as of December 31, 2025, the Partnership's equity holdings are valued at \$221.0 million, or 1.2x cost and up 16.3% from the prior year.

In line with our going-in investment strategy to divest Spectrum's four units separately, we began evaluating alternatives for the Finland-based Marioff business unit in late 2025. On March 22, 2026, Spectrum signed a definitive agreement to sell Marioff to European private equity firm Inflexion at an enterprise value of \$861.0 million, or 16.0x EBITDA, a significant premium to the 11.1x entry

¹ Past performance is not necessarily indicative of future results. The gross multiple of cost set forth herein is presented on a gross basis, which does not reflect fees, expenses, and carried interest. See "Fund Performance" for total fund gross and net performance metrics. Returns show unrealized valuations. The actual realized return of such unrealized investment may differ materially from the returns indicated herein. Please see "Important Information" at the front of this report for more information.

multiple. The transaction is expected to close in the second or third quarter, subject to customary regulatory approvals, and will result in a partial liquidity event for the Partnership. Our 2026 quarterly reports will provide more details on the divestiture.¹

SPL. In March 2025, in response to SPL's largely self-inflicted underperformance in 2024, we recruited a new CEO with a strong track record leading technical services companies through different economic cycles, integrating acquisitions, and executing private equity exits. Under his leadership, SPL strengthened its senior team and completed two environmental lab add-ons. SPL paid \$16.8 million for the two add-ons, representing an accretive 6.1x their combined \$2.8 million of EBITDA, and financed them with cash on hand and senior debt from existing lenders.

SPL's 2025 performance was disappointing. Pro forma revenue declined 9.2% year-over-year to \$137.9 million, and EBITDA decreased 19.4% to \$30.9 million. The revenue decline was driven by continued underperformance in the metrology and data services segments, partly offset by growth in energy and environmental lab testing. The EBITDA decline reflects lower metrology and data services revenues as well as G&A investments in building the new leadership team. As of December 31, 2025, net debt to EBITDA was 7.0x, up from 5.3x the prior year.

Looking ahead, we expect performance to improve under strengthened leadership. SPL has sharpened focus on key priorities and improved coordination between operations and finance. As of December 31, 2025, Sentinel is valuing SPL at the same 8.6x EBITDA we paid for the business, unchanged from the prior year. Adjusted for net debt outstanding as of December 31, 2025, the Partnership's holdings are valued at \$42.9 million, or 0.5x cost and down 57.9% from the prior year.¹

TriMech. For TriMech, 2025 was transformational. As part of a long-planned leadership succession, TriMech appointed a seasoned executive as Global CEO. With a track record leading high-performing technology companies, he most recently served as President of Cerberus Technology Solutions. The former CEO transitioned to a board-only role. Also in 2025, TriMech entered the rapidly growing AVEVA ecosystem by acquiring three software resellers in this new adjacent market. The \$71.0 million aggregate purchase price represented an accretive 6.7x combined EBITDA of \$10.5 million and was financed with new senior debt. For the year, TriMech performed well—pro forma for the three add-ons, revenue rose 8.8% year-over-year to \$462.5 million, and adjusted EBITDA increased 7.6% to \$81.4 million. Revenue growth was driven by robust results in the new AVEVA segment and strong performance across core applications solutions. EBITDA growth benefited from cost savings realized through integrating the acquisitions. As of December 31, 2025, net debt to EBITDA was 5.5x, down from 5.8x the prior year.

As of December 31, 2025, we are valuing TriMech at the same 11.2x EBITDA multiple we paid for the combined U.S. and U.K. platforms we began with, unchanged from the prior year. Adjusted for net debt outstanding, the value of the Partnership's holdings as of December 31, 2025 was therefore \$232.9 million, or 1.4x cost and up 30.9% from the prior year.¹

¹ Past performance is not necessarily indicative of future results. The gross multiple of cost set forth herein is presented on a gross basis, which does not reflect fees, expenses, and carried interest. See "Fund Performance" for total fund gross and net performance metrics. Returns show unrealized valuations. The actual realized return of such unrealized investment may differ materially from the returns indicated herein. Please see "Important Information" at the front of this report for more information.

As of year-end, the average holding period for the 11 unrealized companies was 3.4 years. The values of each portfolio company and the performance of the total portfolio as of December 31, 2025 are highlighted in the table below.

Portfolio Company Valuations¹
December 31, 2025
(\$000s)

Average Enterprise Value = \$391.1 million				Average Hold Period = 3.8 years			

Portfolio Company Operating Metrics

In 2025, aggregate revenue and EBITDA for the Partnership's 11 unrealized portfolio companies increased despite the impact of tariffs. Revenue rose 5.1% year-over-year to \$3.1 billion, and EBITDA

¹ Past performance is not necessarily indicative of future results. The gross multiple of cost and gross IRR metrics set forth herein are presented on a gross basis, which does not reflect fees, expenses, and carried interest. See "Fund Performance" for total fund gross and net performance metrics. Returns show unrealized valuations. The actual realized return of such unrealized investment may differ materially from the returns indicated herein. Please see "Important Information" at the front of this report for more information.

increased 3.9% to \$654.8 million. NSI, RecGroup, Spectrum, and TriMech led the bottom-line growth, with their combined EBITDA rising 15.6% to \$58.5 million. This was partly offset by Bandon, Empire Auto, and SPL, whose EBITDA declined \$32.4 million, or 22.4%. EBITDA for the remaining four portfolio companies was largely unchanged. The table below summarizes the financial performance of the 11 unrealized companies.

11-Company Portfolio Income Statement¹
(\$ in millions)

	12 Months Ending December 31,			
			Change	
	2024	2025	\$	%
Revenue	\$2,949.1	\$3,100.6	\$151.5	5.1%
EBITDA	\$630.1	\$654.8	\$24.6	3.9%
<i>EBITDA Margin</i>	21.4%	21.1%		
Capital Expenditures	\$53.4	\$48.7	(\$4.7)	(8.8%)
<i>CAPEX as % Revenue</i>	1.8%	1.6%		

For the 11-company portfolio, net tangible assets employed as of December 31, 2025 totaled \$787.2 million. These assets generated \$654.8 million of EBITDA, representing a strong 83.2% return on net tangible capital invested and a healthy 21.1% EBITDA margin. Capital expenditures in 2025 were just 1.6% of sales, underscoring the portfolio's modest capital intensity and efficient conversion of EBITDA to cash. These dynamics produce significant free cash flow and provide flexibility to fund growth and reduce debt.

Over the average 3.4 years we have held the 11 companies, total debt has increased \$687.5 million, which results from (i) \$745.2 million of incremental debt to fund 71 add-ons and (ii) \$105.0 million of new debt to fund a dividend recap at Empire Auto, partly offset by (iii) \$125.4 million of proceeds from NSI's asset divestiture and (vi) \$37.8 million of free cash flow generation. The chart below highlights the changes in debt since the closings of the 11 platform investments.

11-Company Portfolio Change in Net Debt

During our ownership period, aggregate portfolio EBITDA has increased by 36.3%, or \$174.5 million. At year-end, the portfolio's net debt to EBITDA was 5.8x, down modestly from 5.9x at the time of the initial investments. The table on the next page summarizes key portfolio-level EBITDA and leverage metrics.

¹ All data is fully pro forma for the October 2025 divestiture of NSI's HVAC division.

Portfolio EBITDA and Leverage Trends¹

	At	At	Change	
	Closing	12/31/2025	\$ / x	%
EBITDA (\$ millions)	\$480.3	\$654.8	\$174.5	36.3%
Net Debt to EBITDA	5.9x	5.8x	(0.1x)	(2.0%)

We consider the portfolio's 5.8x net-debt-to-EBITDA ratio manageable. Over the portfolio's average 3.4-year hold period, value has been created, driven by prudent capital structures, aggregate EBITDA well above levels at investment, and valuation multiples generally below the industry median for comparable companies.

Sustainability and Responsibility Initiatives²

Sustainability and responsibility (S&R) have guided Sentinel's business practices, and we continue to institutionalize these principles across our platform. In 2025, we re-engaged Malk Partners, a leading S&R advisor to private equity firms, to support Sentinel's S&R efforts, including analysis of 2024 data for 20 portfolio companies and Scope 1 and 2 GHG emissions for 15 companies. This work provided company-specific and portfolio-level insights and, for the first time, enabled Sentinel to share select S&R metrics for certain portfolio companies on request.

We believe an inclusive Sentinel workplace starts with listening to our team. Based on feedback from our third annual employee engagement survey, we refined business practices and expanded our mentorship program to include our newest associate class. All employees have access to inclusivity tools, workshops, and resources. We also launched a Sentinel women's affinity group to foster connection and support.

Inside Sentinel and across our portfolio companies, employee well-being and personal wealth creation remain central to our S&R strategy. In 2025, we launched our first broad-based equity incentive program in partnership with Ownership Works at portfolio company Spectrum Safety Solutions, providing nearly 14,000 employees the opportunity to share in the rewards of Spectrum's success.

For 2026, we are working with Malk to collect 2025 S&R data from portfolio companies. In January, the Sentinel team participated in training on professional conduct, workplace civility, and ethics. In February, we partnered with the Winters Group to deliver firmwide training on effective mentoring and to strengthen our mentorship program.

Organizational Update

A year ago, we shared with LPs our long-term plan for Sentinel's leadership succession. The plan was developed deliberately over time with clear objectives: to ensure continuity of judgment, organization stability, and a thoughtful, orderly transition of leadership. Central to this plan was Partner Eric Bommer becoming Sentinel's Co-Managing Partner and David Lobel's ultimate successor. We are

¹ All data is fully pro forma for the October 2025 divestiture of NSI's HVAC division.

² Sustainability and responsibility goals are aspirational and not guarantees or promises of meeting such goals, and distinctions and regional variations exist in the meaning and use of these terms. There is no guarantee that any investment or company will have or create a positive sustainability and responsibility impact or that any Sentinel sustainability and responsibility consideration will ultimately align with Sentinel's or any investor's goals. Please refer to "Important Information" at the front of this report for further information.

pleased to report that implementation is proceeding smoothly, and, importantly, our organization has fully embraced the transition.

Over the past 15 months, this leadership evolution has extended beyond the Co-Managing Partner transition and reflects both the continued advancement of our next generation and the natural progression of long-tenured partners into new roles.

Partners Paul Murphy and Jim Coady informed us late last year that Sentinel VII would be their final fund as deal leads. Paul transitioned to a Senior Advisory Partner role in early 2026 and will remain fully engaged with leading his portfolio companies through their exits. He will also continue to mentor and develop our junior professionals, a responsibility he has long taken seriously.

For Jim, an opportunity emerged to consult with Harvard, his alma mater, on its co-investment strategy while remaining meaningfully engaged at Sentinel. Harvard has long been an important part of Jim's life. He has been actively involved with the university for many years, most recently serving as Chair of the Harvard Club of New York. His family also maintains deep ties to Harvard—he met his wife there, and his daughter is currently a freshman. As with Paul, Jim will transition to Senior Advisory Partner, continuing to engage with his Sentinel portfolio companies while consulting for Harvard. Any potential conflicts will be managed in accordance with our established procedures.

In another planned transition, long-tenured Chief Accounting Officer Sandy Tam will succeed CFO Doug Levy, while Doug transitions to a Senior Advisor role. Sandy and Doug have worked closely together for the past 17 years—Sandy was Doug's first hire. Doug joined Sentinel 20 years ago as our first CFO and will remain actively engaged with our firm. Together, Doug and Sandy have built a strong, disciplined, and deeply experienced finance and tax organization.

Jim's, Paul's, and Doug's contributions to Sentinel over more than two decades have been foundational to the firm's success and culture. Their continued involvement ensures continuity while creating expanded leadership opportunities for the next generation.

During the past year, we had five departures. Mike Gebicki, Managing Director, Credit Strategies, has returned to his banking roots, and we expect to continue working with him as a lender, as we have for more than two decades. Principal Louis Brotherton has launched a consulting firm focused on providing specialized, data-driven services to private equity portfolio companies. We support him in this endeavor and anticipate collaborating as his business develops. Three junior-level departures included Tax Manager Justin Augustine and two second-year Associates: Liam McCabe, who left for another opportunity, and Claire Fletcher, who is now pursuing a PhD in economics.

Including Sandy Tam, 10 team members were promoted across the firm in 2025. Associates Kamryn Bloh, Sam Lettes, Lucy Pearce, and Josiah Wilson were promoted to Senior Associate; Senior Associates Trevor Anderson and Mike Griffin were promoted to Vice President; Vice President George Appling to Principal; Fund Accounting Manager Dale Gao to Assistant Controller; and Assistant Controller Elvira Lee to Vice President, Finance.

In 2025 and the first quarter of 2026, Sentinel welcomed 10 new colleagues: a head of AI, two operating partners, two senior accountants, and five investment associates. Today, our professional and administrative staff stands at 98. Profiles of our new team members follow.

Chris Lenoci joined Sentinel as an Operating Partner. He has worked closely with Sentinel since 2022, when he joined portfolio company New You Bariatric as CFO. Chris's deep experience in the multi-site healthcare segment includes roles as CFO of The Smilist Management, a private equity-backed DSO, and Vice President at investment bank Moelis. He holds a BS in accounting and finance from the University of Maryland and an MBA from Yale University's School of Management. Chris is also a CFA charterholder and CPA.

Dr. Yoni Malchi joined Sentinel as Managing Director, Head of AI, bringing more than a decade of experience in AI, data science, and digital transformation. Previously, he was a Managing Director at World Wide Technology, where he led and built the firm's AI practice. Prior to that, Yoni was an Executive Director in JPMorgan Chase's Intelligent Solutions group, leading a cross-functional team of data scientists. Earlier in his career, he was a technology consultant to NASA and the United States Air Force. Yoni holds a B.S. from Union College and an M.S. and PhD from Penn State University.

Ellen Paton joined Sentinel as an Operating Partner. She has worked closely with Sentinel since 2023, when she served as Corporate Controller at Sentinel portfolio company Empire Auto Parts. Before Empire, Ellen held senior finance leadership positions, including Corporate Controller of SPI and CFO of Penguin Frozen Foods. She began her career at EY and brings more than 15 years of combined experience in public accounting and providing fractional CFO and controller services across multiple organizations. Ellen is a CPA and holds a B.S. in accounting with high honors from the University of Illinois.

Michael Dunne joined Sentinel as a Senior Tax Accountant. Previously, he spent three years at RSM as a Senior Tax Associate in their asset management practice. Mike is a CPA and holds a BS in accounting from State University of New York at Oneonta.

Scooter Harrington joined Sentinel as an Associate. He previously spent three years in William Blair's Investment Banking Analyst Program. Scooter holds a BS in management science and engineering and an MS in sustainability science and practice from Stanford University. At Stanford, he was a member of its NCAA Division I football team and, after graduating, signed as an undrafted free agent with the Chicago Bears.

Nancie Kung joined Sentinel as a Senior Accountant. Previously, she was a Senior Audit Associate at Ernst & Young in its asset and wealth management practice. Nancie is a CPA and holds a BA in economics and accounting from University of California, Los Angeles.

Sarah Michel joined Sentinel as an Associate from Piper Sandler's Investment Banking Analyst Program, where she spent two years. Sarah holds a BBA in finance and economics from the University of Wisconsin-Madison.

Jushan Samra joined Sentinel as an Associate from Lincoln International's Investment Banking Analyst Program, where he spent three years. He previously was an analyst in Goldman Sachs' Personal Financial Management team. Jushan holds a BS in finance from Long Beach State University and an MS in finance from Vanderbilt University.

Donovan Sermons joined Sentinel as an Associate from William Blair's Investment Banking Analyst Program, where he spent three years. He holds a BS in communications and an MS in management from Northwestern University, where he was a member of its NCAA Division I football team.

Fulton Smith joined Sentinel as an Associate from Harris Williams’ Investment Banking Analyst Program, where he spent two years. He holds a BS in finance, cum laude, from Wake Forest University, where he captained the men’s golf team to an ACC championship.

News Highlights from Other Active Sentinel Funds^{4,5}

Today, Sentinel has fully realized four flagship equity funds and actively manages three successor funds and three affiliated-fund strategies. The fully realized funds are Sentinel I (1995 vintage), Sentinel II (1998 vintage), Sentinel III (2005 vintage), and Sentinel IV (2009 vintage). Highlights of our six active funds include:

Sentinel V (2014 vintage) is now in its advanced harvest phase and will explore sales for its four remaining investments, all of which are performing well. The fund’s 17 realizations have generated a 2.6x gross multiple of cost, a 25.8% gross IRR, a 20.6%/20.1% net levered/unlevered IRR, a 1.9x DPI, and a 2.1x TVPI.

Sentinel VII (2023 vintage) sold a portfolio company division—the fund’s first material realization—in October 2025, which returned 0.3x the cost of the investment. With eight platform investments under its belt, Sentinel VII is 41.7% drawn. It has produced a 1.1x gross multiple of cost, a 0.1x DPI, a 6.9% gross IRR, and a 1.1%/1.9% net levered/unlevered IRR.

Sentinel Capital Solutions I (2018 vintage) has completed its primary investment phase and fully or substantially realized 12 of its 23 investments. With a 0.9x DPI, a 16.1% gross IRR, and a 13.6%/12.6% net levered/unlevered IRR, our inaugural structured capital solutions fund continues to outperform expectations.

Sentinel Capital Solutions II (2023 vintage) has deployed 49.7% of its capital in 14 investments. This young fund enjoyed a solid year for liquidity, receiving \$56.4 million of distributions, or 6.7% of

¹ These individuals are not Sentinel employees.

⁴ *Past performance is not necessarily indicative of future results.* Returns show unrealized valuations. The actual realized return of such unrealized investment may differ materially from the returns indicated herein. Please see “Important Information” at the front of this report for more information on calculation methodologies for net returns.

⁵ Full records for the funds referenced in this section are available on request.

invested capital, in 2025. The fund has produced a 0.3x DPI, a 13.9% gross IRR, and an 11.6%/11.9% net levered/unlevered IRR and is meeting expectations.

[Sentinel Continuation Fund I \(2021 vintage\)](#) is 19.2% deployed, and its zero DPI, 4.5% gross IRR, and 3.4%/3.8% levered/unlevered IRR are not yet meaningful indicators of performance. We expect the fund's investment pace to accelerate as our other funds exit high-performing assets.

And as discussed in this letter, Sentinel VI (2019 vintage) has deployed 103.9% of its capital and completed its primary investment phase. To date, Sentinel VI has exited seven of 18 platform investments, generating a 2.1x gross multiple of cost and a 30.1% gross IRR. As of the end of the fourth quarter, Sentinel VI has produced a 1.4x gross multiple of cost, a 0.6x DPI, a 13.6% gross IRR, and a 9.6%/9.5% net levered/unlevered IRR.

With significant capital available for investment and a deep, highly experienced team, Sentinel is well positioned to pursue new investment opportunities for Sentinel VII and Sentinel Capital Solutions II, support our management partners in building great businesses, prepare portfolio companies for successful exits, and oversee our 98-member firm and \$9.0 billion of capital under management. You can count on us to continue navigating today's market volatility with the discipline and care that have long defined our investment approach.

Respectfully yours,

David S. Lobel

Investment Policy Statement

SENTINEL CAPITAL PARTNERS VI, L.P.

SENTINEL CAPITAL PARTNERS VI-A, L.P.

SENTINEL CAPITAL INVESTORS VI, L.P.

Effective January 1, 2013, the general partners of the private funds (the “Funds”) advised by Sentinel Capital Partners, L.L.C. and/or its advisory affiliates (together, “Sentinel”) adopted an Investment Policy Statement (the “Policy Statement”) with respect to each of the Funds. The Policy Statement was adopted to clarify each Fund’s regulatory status as a “private equity fund,” and not a “hedge fund,” for purposes of the Form PF that is filed by Sentinel under Rule 204(b)-1 of the Investment Advisers Act of 1940, as amended.

The Policy Statement provides that the Funds may not (a) incur indebtedness (including guarantees of portfolio company borrowings), if the aggregate amount of such indebtedness of the Fund is greater than 50% of the Fund’s net asset value plus unfunded commitments, (b) incur Fund-level gross notional exposure (e.g., through derivative instruments) greater than 200% of the Fund’s net asset value plus unfunded commitments or (c) sell securities or other assets short or enter into similar transactions (other than for limited purposes of hedging currency exposure or managing duration).

The Policy Statement and the restrictions set forth therein may be modified by Sentinel at any time, but only to the extent consistent with a Fund’s governing documents.

March 2026
