To the Limited Partners of Matrix Partners VII, L.P., Matrix Partners VIII, L.P., Matrix Partners IX, L.P., Matrix Partners X, L.P., Matrix Partners XI, L.P., and Matrix Partners XII, L.P.:

The US economy grew at an annualized rate of 2% in the first quarter, coming in slightly below expectations, but marking a meaningful rebound from softer growth in late 2025. The expansion was driven primarily by strong CAPEX investment - particularly in AI - and government spending, and partially offset by an increase in imports. Inflation remained elevated, weighing on consumer purchasing power and contributing to early signs of moderating demand. Public markets became more volatile following a resilient close to 2025, as geopolitical tensions - most notably the Iran conflict - prompted a broad shift toward risk aversion, with investors trading out of higher risk assets and adopting a more cautious posture. As a result, all three major indices declined in the first quarter, with the Nasdaq down 7%, and the S&P and Dow falling 5% and 4%, respectively. Market leadership remained concentrated and the prior momentum in large-cap technology has begun to fade amid valuation pressure and shifting capital allocation priorities. At the same time, the venture and growth ecosystem continues to grapple with the "SaaS-pocalypse" - a continued and accelerating reset in software valuations and operating expectations - driving further compression in public SaaS multiples. Since March 31, however, public markets have rebounded meaningfully, supported by strong AI-driven corporate earnings, resilient labor market data, and improving confidence in long-term growth.

Concentration has defined the venture market in recent years, but the first quarter of this year marked a new extreme. Headline investment levels were exceptionally strong, with \$267.2 billion deployed during the quarter - exceeding most full-year totals outside of peak years such as 2021 and 2025 - yet this activity was concentrated in a small number of transactions. Deal count declined 15% quarter-over-quarter to 3,336, underscoring the growing disconnect between capital deployment and underlying market breadth. This concentration was most visible at the very top of the market, as four transactions above \$15 billion were completed during the quarter. Artificial intelligence remains the primary driver of this dynamic. AI-related companies accounted for approximately 89% of total deal value while representing roughly 42% of deal count, highlighting the degree to which capital is being directed toward a narrow subset of opportunities. The quarter was characterized by a resurgence in mega-round activity, particularly in late-stage and infrastructure-oriented AI companies, where large amounts of capital are being deployed at elevated valuations and on accelerated timelines. Outside of AI, the funding environment remains constrained, with fewer active investors, longer diligence cycles, and increased emphasis on capital efficiency and path to profitability. As a result, while top-line investment figures suggest renewed strength, underlying activity across much of the ecosystem remains subdued.

Exit activity in Q1 2026 rebounded at the headline level but remained highly concentrated, with liquidity still constrained across much of the venture ecosystem. Total exit value reached a quarterly record of \$347.3 billion, driven primarily by a small number of large transactions, while overall exit count declined 14% when compared to the same period in 2025. xAI's merger with SpaceX marked the largest VC-backed exit of a US company to date, though it was not a traditional liquidity event and its broader significance was muted by SpaceX's potential IPO at an estimated \$1.5 trillion+ valuation later this year. This reinforces that activity remains selective rather than indicative of broad-based recovery. Public market activity improved modestly, with 20 venture-backed listings generating \$19.6 billion in value - an increase of 25% in terms of deal count and 9% in value. Looking ahead, a potential wave of IPOs from some of the largest AI companies could represent a step-function increase in liquidity. However, ongoing market volatility and geopolitical uncertainty continue to weigh on issuance, leading many companies to delay listings or pursue alternative liquidity pathways. M&A activity has provided some support, particularly for high-quality and AI-related assets, though broader strategic appetite remains measured. As a result, the backlog of mature private companies seeking liquidity continues to build with valuations from the 2020-2021 cycle still misaligned with current public market benchmarks.

Fundraising trends reflect a similar pattern. Top-line activity in Q1 2026 showed signs of recovery, with \$47.8 billion raised across 172 funds - an increase of nearly 4x in terms of capital raised and 2x in terms of fund count when compared to the same period in 2025. However, this recovery was highly concentrated, with six fund managers accounting for approximately 76% of total capital. Notably, more \$1 billion+ funds closed in Q1 than in all of 2025. This concentration mirrors the broader market dynamics, with capital increasingly concentrated among a small group of established firms and directed toward a narrow set of opportunities.

Against this backdrop, our approach remains consistent. In cycles defined by this degree of concentration, where the loudest narratives attract the most capital and consensus feels "safe," the most durable returns tend to accrue to those willing to commit early, before categories are widely understood and before pricing reflects what later becomes obvious. Many of our strongest investments were made at moments when the underlying thesis was unfashionable, the market was small, or the founder profile sat outside what was being funded at scale. We believe today's environment, with capital plentiful but discernment scarce, will produce the same kinds of opportunities, and we are focused on supporting our portfolio companies through this period while investing selectively where conviction holds.

We look forward to seeing you at our annual meeting this coming fall and will share details as soon as they are available.

Details on portfolio activity during the quarter can be found in the fund-specific letters that follow.

Sincerely,

Matrix Partners

To the Limited Partners of Matrix Partners IX, L.P.:

- During the quarter, the Partnership distributed \$38.3 million of cash to the Limited Partners, bringing cumulative distributions to Limited Partners to \$841.2 million, or 207% of contributed capital.
- Cumulative portfolio value (investment portfolio plus cumulative realized value) increased \$0.9 million during the quarter, remaining at a total of \$3.2 billion (6.5x cost). The appreciation is a result of the markup of one portfolio company.
- Cumulative value to Limited Partners (equity plus distributions) decreased \$0.1 million during the quarter, remaining at a total of \$2.1 billion (5.3x contributed capital). The decrease is the result of operating activity, offset by the portfolio appreciation discussed above.
- From the first capital call in October 2010, the Partnership has invested \$487.4 million (108% of committed capital). This portfolio has appreciated 547% and is currently valued at \$3.2 billion. As of March 31, 2026, the Partnership held securities in eight private companies with a fair value of \$1.8 billion and a cost of \$148.5 million.

During the quarter, **Savage X**, previously valued at 50% of cost, was marked up to cost, resulting in a \$0.9 million increase in portfolio value. The company outperformed its 2025 plan and continues to demonstrate strong operating performance. The updated value represents our best estimate of expected proceeds in the event of a potential sale.

There were no incremental investments and no capital was called during the quarter. The Partnership held cash of \$11.5 million on March 31, 2026, and the net loss from operations for the quarter was \$0.7 million.
