

Q4 2025 Investment Update

Positive Sum Capital III, L.P.

Q4 2025 Update

Dear Partners,

As we look back on 2025, we want to share some reflections on what was a monumental year for both Positive Sum and Colossus, and why we're so energized heading into 2026.

On the media side, 2025 was the most important year of growth for Colossus since its founding. Invest Like the Best almost doubled its audience after we made the leap to video, a growth rate we haven't seen since the show's earliest days and that doesn't count the enormous additional reach from shorter formats across social platforms. Colossus magazine had a breakout year as we published four quarterly issues of the print magazine, reached millions of readers, and built real recognition for the brand. We've generated extraordinary exposure for the entrepreneurs, investors, and companies we've featured on the podcast and in the magazine.

On the investing side, this was our busiest year ever. We made more major new and follow-on investments than in any prior year, and our research team reached new levels of diligence capabilities. Our research, we're told by companies and peers alike, is reaching new levels of quality. In addition to researching new investment opportunities, we now maintain deep, ongoing coverage of our key portfolio positions and the pipeline companies we're most excited about. That coverage infrastructure - onsite visits, detailed memos, and ongoing tracking - is something we plan to scale significantly in the year ahead. This was also the year that our unique value proposition fully resonated with the broader investing community. Much of our deal sourcing came directly from the investors we respect most, who referred and vouched for us to their most exciting companies because of our unique combination of capital, research, and ability to direct attention to the most exciting companies.

This year is about scaling up: significantly expanding the number of companies we cover, growing the reach and quality of Colossus, deepening our research capabilities, expanding our inbound and outbound sourcing motions, and continuing to find new ways to support founders and investors. 2026 also marks the 10-year anniversary of Invest Like the Best, and we have some fun things planned for the occasion later this year.

A quick housekeeping note. We've updated and simplified our valuation policy this quarter. We now hold companies at the price of their most recent arms-length financing transaction unless there are significant business reasons to adjust the mark, or the last transaction is more than 18 months old and the position represents more than 10% of the fund's NAV, in which case we obtain a third-party valuation. This change is reflected in the marks you'll see this quarter. More detail on the portfolio and pipeline can be found in the fund-specific materials below.

As always, thank you for your partnership. Please don't hesitate to reach out with questions, ideas, or feedback.

Warm regards,

PATRICK AND THE POSITIVE SUM TEAM

Q4 2025 Transcript

Firm Update

COLOSSUS

Hi and welcome. This is Positive Sum's Partner Update. This feed is going to provide the latest information on what's happening at the firm and with your investment in the partnership.

ALISON

Welcome to the latest quarterly update from Positive Sum. This is Alison and Patrick here, and we thought we'd kick off with a reflection on 2025, which we've been doing lately together as a firm. It was a monumental year in many ways on both the media and the investing side. Patrick, I'm curious to hear your reflections on Colossus and how that grew into its own in the year, and then also on the investing side, how the types of companies we saw evolved and the research work that we did to support our investment decisions in those companies.

PATRICK

It was certainly the largest, most important year of growth for Colossus since our first year when the company was founded in 2020. That was on the back primarily of two things. The first was extremely impressive growth on Invest Like The Best, which grew almost a hundred percent year over year, which was a growth rate that we haven't seen since the early years of Invest Like the Best.

That was owed to a fateful dinner early in the year with my friend Daniel Ek at Spotify, who I was asking about many things, as always, as one of my key mentors, but also just about podcasts specifically and what he's learning, watching, Spotify, and the platform evolve. And he basically read me the riot act and said, "you need to stop doing audio only? Like everything that's working is working because of video." We started doing video very shortly thereafter, I've learned to listen to Daniel, and that has led to a huge explosion of attention, great new guests, a much higher quality product, much deeper penetration. The hundred percent growth is just in the people listening.

That does not count huge, enormous growth on top of that, of people consuming smaller parts of our podcast through clips on the various social feeds, et cetera. The overall reach just felt so much bigger in the last year than it had in years past when it was still very big. So, that was the first of the two huge explosions we had in Colossus.

The second, and for me, the one that I take even more pride in is the fact that Colossus, the publication, so the media business away from what I do on the podcast, had this big breakout year. I think prior to this year, no one really knew what Colossus was. We had a very explicit goal to change that by trying to diversify away from just podcasts, to finding other ways to feature incredible entrepreneurs, stories about technology, windows into our views from our research team, profiles of investors, and so on.

And so we published four quarterly issues of our print publication, Colossus. I think we reached

millions and millions of people. Some of the profiles had just extraordinary success for those being profiled. The magazine shows up in all sorts of cool and interesting places, including private jet terminals all over the country, which was I think a huge win for us on the distribution side.

And so our goal to make Colossus known, respected, widely distributed, and a huge force of attention for the people that we choose to profile, entrepreneurs and investors, was just a huge success. And that's entirely owed to that team led by Jeremy Stern, who's our editor in chief, Dom Cooke, who's our managing editor, a growing team there. We've made several hires on the Colossus team in just the last quarter. We're hoping to expand more this year as well. We've got some incredible stuff cooking in the kitchen on the Colossus side for 2026. So those were the two big advancements, and I think this year is all about scaling that up.

So I think we have our core formats, our ways of shining attention on the people that we respect in the community, and I'm really excited to build on that in 2026.

ALISON

And then on the investing side, I think we also saw a lot of growth in the year, both in the types and amount of companies that we took a look at and our ability to quickly and deeply underwrite them on the research side.

Could you talk a bit about where you saw the most growth in that part of the business?

PATRICK

We've reached a state now in the research team, which itself has also grown both in terms of capability and knowledge, but also the number of team members, that we have the deepest and broadest coverage of companies that we've already invested in, that are our key central positions that we updated on an ongoing basis, and also the companies in our pipeline that we're the most excited about.

I feel that we've reached the stage where if you take our research and we share it with some of the other investment firms in our space that we respect most, that do very deep research, I think we're approaching being in the mix with them or close to parity with them in terms of depth of research quality and understanding of these companies and these founders.

So that's been really exciting. The downside, of course, is that that's an incredibly labor intensive exercise. There's only so many companies that we can cover in extreme detail, and so I hope to continue to expand that team and the range of our coverage. But I would say that was the main theme of the year, was this doubling and tripling down of the amount of work that we're doing on the handful of companies that we think are the most important and exciting where we may be able to put further capital from the funds in the future and future rounds or buying equity in other ways and that's just been ridiculously exciting.

It's now gotten to the point that for me, personally, the most fun parts of this job are waking up and seeing a new company research report in Slack, or a new profile from Colossus in Slack, both of which are sort of the same thing, two sides of the same coin, deep coverage of the topics that interest us most.

Obviously, we don't publish the internal research stuff, so it's a little bit different, and I would say

it's far more detailed, a little bit drier reading maybe than the profiles. But those are really the things that give me, and I think the team the most energy is just this really deep sense of understanding the things that we're spending our time on.

So this notion of coverage is something that you can expect to see us really push hard. We have specific Q1 goals for how many companies will have kind of at full coverage, the cadence with which we'll return to each company, the product that is the very long memo and writeup that we do at the end of these, they all include pretty extensive onsite visits to the companies from the research team, and myself often going at different times.

That's been for me, the theme of 2025, and the bridge into 2026, is just how deep can we go. Can we really understand the businesses that we're the most excited about, as good or better than anyone else. Obviously, you asked about the types of companies in the landscape, not saying anything original at all, but it is, almost undoubtedly, the most interesting pipeline for private equity markets, I don't know in human history or something?

So many different sub-sectors. Obviously, lots of it driven by AI, but all sorts of adjacent things. Lots of things with hardware that are really interesting to us as a firm. We have quite a large percent allocation to companies that have some sort of atoms component, not just bits, real world hardware, or real world presence of some sort.

We've continued to be really interested in those kinds of companies, and investigating lots of them. So you just have this enormous explosion, whether it's at the energy layer, the chip layer, the model layer, the infrastructure layer, the application layer, across those levels of the stack that totally fascinate us.

We had quite a busy year of investing in 2025, more major investments that we've made in any other year. We've had a relatively slow period since, call it November, so the last four or five months have been quieter. We've been passing on lots of stuff, but the pipeline is as rich and as full of companies as I can remember.

One, maybe other thing worth noting is that I think 2025 was really the year that our unique value proposition fully resonated with the rest of the investing community, especially the people that we most respect. A lot of the sourcing for the deals that we ended up doing came directly from some of these other great investors who are making an investment in a round, and wanted to have us included.

We actually did more rounds this past year where we did not lead the round than we had done in years prior. We still led many rounds during the year, but it felt like a tipping point of being brought into some of the most exciting companies and stories in the portfolios of some of our great peers, and really because of the unique value proposition that they felt we bring to the table that others don't.

We often hear they want someone like us on the cap table, and like us, means have our unique skillset. And there just aren't really any others that have the unique combination of things that we've built. And so that felt like an inflection point this year that we will continue to lean into and balance against one of our favorite things to do, which is just kind of more pure outbound sourcing, calling, asking people for undiscovered gems, underappreciated founders – all the same

questions that have led us to so many of our most exciting investments.

ALISON

I think it was a very cool year too, to see that when we did get that call from investors, our research team's ability to go deep on pretty much any company in any sector, and we did Base Power in energy and companies in very different sectors, and we were able to produce what we were told was some of the best underwrites those companies and other investors had seen of those companies in a matter of days, in many cases, and make a quick decision. So we can talk about this as we talk about what we're excited about for 2026.

We're going to be investing a lot this year, and also more proactive coverage and growing our proactive sourcing as well. But being able to react well when we do get those calls, I think is a muscle we really developed last year. Let's talk about this upcoming year that we're already well into now. It's a big year for many reasons.

One, is that it's the 10 year anniversary of Invest Like the Best, and we have some fun things planned for that, but Patrick, what are you most excited about as you look ahead to the coming year and the highlights that you expect to happen?

PATRICK

Well, it sort of feels to me like our business is going through the same transition that we see the businesses that we try to back go through, which is this original period of feeling around for product market fit, as everyone calls it, followed by a period of scale up of expansion on what is working.

And I think like most companies, we did spend some years really searching for our specific style, our niche where we had a right to win and a sustainable and compounding and growing source of competitive advantage. And I think 2025 was the first time I finished the year thinking like, "okay, I think we've got it. I think we know our taste, we know our style, we know the kinds of companies that get us the most excited."

We've been able to generate the access we want when we want it to these companies. Our source of edge is growing like crazy and feels like on a path to grow a lot from here. So it's a somewhat boring answer, but the honest truth is I'm excited to have there be a year where there's not a ton of new stuff.

It's really just us trying to get deeper and better at the things that give us the most energy, that I think we're the best at that align most with finding great investments and earning great returns and execute against that. So that's further growth in Invest Like The Best, it's expansion of the quality and depth and distribution of Colossus, it's taking coverage from eight to ten companies in the first quarter to a large multiple of that by the end of the year. It's looking for more great researchers and investors to join our team. It's looking for more great writers and ideas for featuring and shining the spotlight we love to shine on the most important and interesting investors and entrepreneurs.

And for me it's a constant learning experience about this unfolding technology landscape. I think we're learning this firsthand. At our offsite last week, we kind of forced everyone to build their own Claude Code projects, which I realize is happening at many offsites around the world these

days, but it really is a visceral experience. And having had this internal software platform called Hubble for several years now, like everyone we're experiencing this sort of takeoff in Hubble's capability, our ability to do those research projects you mentioned for Base, and for Fortell, and and other companies like that in very short order, was really in large part due to all the work that we had done for the years prior, stored in Hubble.

All the research that we've stored and documented and prior experience, like, it really is a compounding asset. So I'm excited to build Hubble into something much more exciting that helps us be better investors. That sort of thing is more table stakes. I think all the great investment firms are trying to figure out how to do this.

So, I don't think it'll be a huge source of differentiation necessarily for us, but I think tied to all the other things that are sustainably differentiated, it will just help us, and I'm excited to push that boundary. So, that's what has me excited is I think we've defined our game, we have a team that loves playing that game, we've had some turnover on the team to really optimize both for talent and for fit and for people passionate about this specific game that we've kind of designed for ourselves.

And as I always say, the reward for great work is more work. I think we've now defined the kind of work that is fulfilling to us, and I just want to lead the team to go do lots of it this year.

ALISON

I think we're always thinking about as a group, what are the different ways we can keep investing and improving how we serve this virtuous flywheel of founders, GPs and LPs. And we have, Patrick, you put it well before, capital and attention to direct, which are both very powerful resources. And as our team is upleveling and the base is continuing to compound, there's more and more we can do to invest in all three of those aspects of the flywheel, and a lot of that you'll see from us this year. So we're all really excited about that.

Fund III Update

ALISON

Okay, let's talk about Fund III. We already covered actually all of the six new companies that we invested in during the quarter in our last update, because they had all either closed or we're about to close by the time we recorded that update. So if you're curious, please go back and listen to that.

But Patrick, are there any highlights in the portfolio that you wanted to touch on this quarter for our LPs?

PATRICK

I would say at a portfolio level, the story has been that we back companies with extremely ambitious plans, and that for the most part, those companies have been meeting those plans. Part of the effort that I started the conversation today with you about coverage and deep quarterly or semi-annual reporting of what we're learning about these companies is tracking, are these companies ahead, behind, or on par, with our specific fundamental expectations for growth in the business. And as I look across the portfolio today, I think the good news is they're basically all

roughly on our expectations.

So whether that's Cognition, who just yesterday rolled out Devin 2.2, which was a huge upgrade and overhaul, and also announced that they're expanding into serving the government as well as sort of a dual-use technology, which we're really excited about.

Whether that's January that came in a little bit ahead of our expectations for end of year run rate bookings in their business. Whether that's Base Power, that actually slightly exceeded our expectations in terms of what we had modeled for new megawatts installed to close out the year. As I ticked through all of the companies, this is kind of roughly what we see is – we're proud to have backed some extremely good executors, people leading these businesses with, like I said, ambitious plans, but so far, even though the investments are all quite young and Fund III, able to hit those lofty expectations, and so that's kind of been the theme of the portfolio.

ALISON

A quick update on fundraising. We had our third close for the fund in December, which brought the total raise to \$270 million.

We expect an additional close imminently, maybe even by the time you're listening to this, sometime around the end of February or early March, that will get us to our \$300 million target. So we'll keep you posted on that close as well.

Before we close a quick update on valuations, we have in the quarter updated and simplified our valuation policy, which is reflected in the marks that you'll see this quarter.

Our policy now is to hold companies at the price of their most recent arms-length financing transaction, so typically the last post money valuation. Unless there are significant business reasons to write the investment up or down, or the last post money valuation is more than 18 months old, and the position is more than 10% of the funds NAV, in which case we would obtain a third party valuation.

So this is a much simpler, more straightforward, and I think more market approach to valuation, and wanted to mention that as it impacted the marks of a few companies in the funds this quarter. And with that, thank you as always for your partnership and please feel free to reach out anytime with thoughts or questions. We'll talk to you soon.

Backing founders pursuing their life's work.

Deal Background

Sourcing

We were introduced to the founder through a friend and fellow investor.

Investment Drivers

January had demonstrated strong traction with its early customers, going head to head against legacy debt collectors and earning significant wallet share. The team took a digital-first approach from day one and has built up a robust dataset allowing for the effective use of AI throughout the business, which competitors will not be able to easily replicate.

Our Edge

Our team developed a strong relationship with the founder during the diligence process and earned the right to invest by being helpful to the company before we wrote our check.

Q4 2025 Update

Base Power had a strong 2025 and is making progress on its next generation of batteries. In addition to expanding its Texas footprint, the company will also be building out a new manufacturing facility and moving forward with new state expansion opportunities in 2026.

Deal Background

Sourcing

We first met Zach, the founder and CEO of Base, through the podcast and mutual friends (Zach has been a longtime listener).

Investment Drivers

The residential battery market is growing quickly and we believe that Base has the opportunity to win this massive market. Base is pursuing end-to-end battery verticalization to drive costs down and build a strong, new consumer brand. If successful at scale, Base will drive amazing outcomes for homeowners, and become a large stabilizing force for the electric grid. Zach and his team have been extremely thoughtful in how they’ve designed their product and business, are deeply committed to bringing a reliable and affordable home energy service to consumers, and are unparalleled in their ability to marshal resources towards that mission.

Our Edge

Our quick and deep underwriting of the company through our research platform, and our ability to shape and share their story with our audience.

Sourcing

We met Dave and Ridgeline in 2019 while Patrick was running OSAM, as a prospective customer. We’ve kept in touch since, and began serious discussions about investing almost two years ago.

Investment Drivers

Ridgeline has been at the vanguard of implementing AI that customers actually use, and have built a system of record that allows real time views into all of an investment manager's data and systems, bringing an industry on antiquated technology into the modern software world. Founder Dave Duffield is one of the great software entrepreneurs and has built an exceptional team.

Our Edge

Our unique ability to help them grow their business through our network and audience of investors and asset managers.

Q4 2025 Update

Fortell (f.k.a Chromatic) is building its AI-powered hearing aid platform, with next-generation multi-microphone models and the supporting custom silicon needed to run them in real time. D2C product successfully launched at the end of Q4 2025. They will be opening an NYC clinic in early 2026.

Deal Background

Sourcing

We were referred to Fortell through our close relationship with Thrive.

Investment Drivers

We believe that Fortell's product is a genuine technological leap in the space, and that will allow for the disruption of incumbents in this \$20Bn+ market. The company's D2C go-to-market approach allows them to bypass the traditional audiologist distribution channel and instead earn tech-company economics.

Our Edge

Our close relationship with other investors in the company, as well as our quick and thorough underwrite, got us access to this deal.

Deal Background		
Sourcing We were referred to Physical Intelligence by one of its founders, whom multiple people on our team have known for many years, after we released a deep dive on the robotics space in <i>Colossus</i>.	Investment Drivers Physical Intelligence is aiming to build the general foundation model for robotics. They have remarkable talent density and a data flywheel plan that, if successful, will allow them to be a one-of-a-kind company in the robotics space and earn outsized returns.	Our Edge Our expertise in robotics, demonstrated in <i>Colossus</i>, and prior relationship with the founding team both earned us the right to invest and gave us conviction in the opportunity.

Deal Background

Sourcing

We first met Luca, the founder and CEO, through a prominent European entrepreneur.

Investment Drivers

We believe that Bending Spoons is run with extremely good financial diligence and the team is excellent at identifying high value investments for the platform. The founder, Luca, has demonstrated extreme competence and resilience building this business to date and we believe that Bending Spoons will be a huge platform in the long-term.

Our Edge

We built a relationship after recording a podcast episode with Luca.

Deal Background

Sourcing

We knew the founder from overlapping professional experience and they were big fans of *Invest Like the Best*.

Investment Drivers

Witan Labs is a seed stage investment, so our biggest investment driver was the founding team, all of whom we believe are talented and good fits for this problem. We also think that our research and distribution will allow us to help the company succeed as they go to market.

Our Edge

Our personal relationship with the founding team, their following of the podcast, and our ability to eventually raise awareness amongst their ideal customer profile, allowed us to win this deal.

Deal Background

Sourcing

We met Retro through our relationships with their lead investors.

Investment Drivers

Retro's founders brought senior experience in product and engineering from Facebook and Instagram. They had clever ideas for social platform monetization aligned with user interests. We saw the opportunity to establish a toehold and build a deeper relationship with the team.

Our Edge

Our ability to help promote Retro to our audience.

Deal Background

Sourcing

We were introduced to Bernard by another pre-seed investor that we know well.

Investment Drivers

The founding team has a strong software background, and we believe the trades market is both underserved and large, so the opportunity is large if the team is able to find product market fit. We felt that investing in this early SAFE round would give us a chance to get to know the team better and earn allocation as the company grows.

Our Edge

Our longstanding relationship with one of the other pre-seed investors got us access to this investment at its inception.
